
☐☑Story # - Story Basic Description

Description:

Place holder description

Pre-regs:

- Req 1
- Req 2

Tasks:

- Task 1
- Task 2

Test Scenario:

- Test 1
- Test 2

Definition of Done: definition

Story Points: x

Assignee: Erfan Tavassoli

☑Story 1 - Provide a Sorted list of Teams based on Team Name

Description:

As a baseball fan, I want to be able to see a sorted list of all baseball teams sorted by team name in CLI interface

Pre-regs:

- Database table for baseball teams

Tasks:

- Retrieve a list of all baseball teams
- Sort the list by team names
- Display the sorted list in the terminal for temporary usage

Test Scenario:

- All baseball teams are retrieved

- Teams are sorted alphabetically by team name

Definition of Done: Have a sorted list of all baseball teams displayed in the terminal sorted by team name

Story Points: 1

Assignee: Shahob Shahmirzadi

☑Story 2 - Admin Page Login GUI

Description:

As an administrator, I want to be able to login to my admin page with a username and password securely.

Pre-regs:

- Securely stored logins
- Access to check username/password with stored logins

Tasks:

- Create a login page with QT'
- Have fields for admins to enter username and password
- Switch pages to the dashboard page(another story) after successful login

Test Scenario:

- Attempt login with valid credentials
 - Switches to another page
- Attempt login with invalid credentials
 - Present warning for invalid login

Definition of Done: A QT GUI which allows the admin to login in to the admin dashboard with proper credential checking

Story Points: 3

Assignee: Erfan Tavassoli

☑Story 3 - View Single Team Information GUI

Description:

As a baseball fan, I want to view detailed information about one baseball team such as their Stadium name, Seating capacity, Location, playing surface, Team name, League, Date opened, Distance to center field, Ballpark typology, Roof type.

Pre-regs:

- Database Tables for all the information
- Helper functions to retrieve information from database
- GUI for browsing all teams to be able to select the team to view

Tasks:

- Display all the information about the baseball team
- Be able to go back to the browsing list(another story)

Test Scenario:

- All information is present
- All information is accurate to the baseball team

Definition of Done: have a QT page which accurately displays all the information about the baseball team.

Story Points: 3

Assignee: @alireza

☑Story 4 - Display All Teams Sorted by Stadium Name GUI

Description:

As a baseball fan, I want to see all teams sorted by stadium name in a nice clean list.

Pre-regs:

- Database tables for stadium information
- Sorting methods

Tasks:

- Display a list of teams
- Have the list sorted by stadium name

Test Scenario:

- All teams displayed
- Teams ordered by stadium name

Definition of Done: A qt window that

Story Points: 3

Assignee: @alireza

☑Story 5 - Filter by League GUI

Description:

As a baseball fan, I want to filter teams by American or National League so that I can view specific groups in a nice organized list and filter dropdowns.

Pre-regs:

- Database for information
- Filtering logic
- Team browsing list GUI

Tasks:

- Design a GUI for displaying baseball teams
- Connect filtering logic to the list

Test Scenario:

- All teams are displayed
- League filter is properly filtering teams

Definition of Done: A nice, clean intuitive GUI for being able to filter the displayed baseball teams by league.

Story Points: 3

Assignee: @alireza

☐Story 6 - Sort Stadium Data CLI

Description:

As a baseball fan, I want to view stadium data and be able to sort the information on different stadium characteristics such as capacity, date opened, and topology.

Pre-regs:

- Database

Tasks:

- Implement sorting/filtering for stadium information
- Format information nicely for future GUI story
- Display information via terminal

Test Scenario:

- All stadiums are present
- filters/sorts accurately apply to data

Definition of Done: A terminal interface that will update and show the stadium information with filters/sorting.

Story Points: 2

Assignee: Shahob Shahmirzadi

☑Story 7 - Display Team Names with Open Roof GUI

Description:

As a baseball fan, I want to be able to view all baseball teams with an easy way to know if they have an open roof stadium

Pre-regs:

- Database
- GUI for viewing baseball teams

Tasks:

- Implement a filter for stadium roof type
- Apply filter to existing GUI for team browsing

Test Scenario:

- No missing teams
- Proper filtering for teams with only open roofs

Definition of Done: A nice clean GUI updated with new filters for open roof stadiums

Story Points: 3

Assignee: Erfan Tavassoli

☐Story 10 - Souvenir Purchasing System CLI

Description:

As a baseball fan, I want to purchase souvenirs at each stadium on a trip to be able to plan my purchases and have it tracked across the app.

Pre-regs:

- Database
- Trip planning system

Tasks:

- Implement backend systems for buying souvenirs
- Backend system for tracking purchases

Test Scenario:

- Purchases accurately tracked to backend with accurate prices

Definition of Done: An intuitive backend system that is able to add souvenirs to the purchase history and allow the purchase history to be able to viewed via a CLI interface

Story Points: 5

Assignee: @david

□Story 11 - Track Total Cost and Items

Description:

As a baseball fan, I want to be able to track the total cost and number of items on my baseball visits to track my spending.

Pre-regs:

- Buying system
- Stadium traversal system

Tasks:

- Track and add information about purchases
- Store it in the backend
- Calculate and compile the overall information such as the total cost

Test Scenario:

- Desk check of the purchases being accurately added

Definition of Done: The purchases done during trips to stadiums are accurately recorded in the backend and displayed temporarily via the terminal.

Story Points: 5

Assignee: @david

□Story 12 - Admin Dashboard Page Souvenir Changing GUI

Description:

As an admin, I want to be able to manage a stadiums souvenir data by being

able to edit existing souvenir information as well as add/remove souvenirs

Pre-regs:

- Database table for stadium and souvenir information
- Access to the tables to edit and manage informations

Tasks:

- Display stadium and per stadium list of souvenirs
- Have the souvenir list only display items from the selected stadium only
- Allow editing existing souvenirs
- Add and remove souvenirs

Test Scenario:

- Accurate display of stadiums and the stadium' s souvenir
- Allow modification of souvenirs(existing, adding, removing) and have changes persist in the backend

Definition of Done: A section in the admin dashboard GUI that allows viewing and editing of souvenirs for a stadium.

Story Points: 3
